

Monitorare la latenza del disco totale della macchina virtuale su VMware 4.x

Scritto da Administrator

Venerdì 25 Novembre 2011 14:34 - Ultimo aggiornamento Venerdì 25 Novembre 2011 14:37

Come fare per essere avvisati su vCenter Server 4.0 e 4.1 quando la latenza del disco virtuale totale della macchina super una certa soglia.

(How to configure the allarm in vCenter Server 4.0 and 4.1 when the for virtual machine total disk latency exceeds a threshold)

Virtual Machine Management

- **The default vCenter Server alarm for virtual machine total disk latency does not function on vCenter Server 4.0 and vCenter Server 4.1**

This issue is resolved in this release. This alarm is disabled on upgrade and on new installations is no longer created by default. Additionally, any custom alarms utilizing VM Total Disk Latency (ms) are disabled after an upgrade. The new trigger now available is VM Max Total Disk latency (ms). For more information, see [KB 1025176](#).
